Widespread very strong southerly winds affected much of central and south-central Kansas from the late morning through the afternoon hours on the 23rd, in response to a strong dry line and cold front approaching from the west and northwest. Widespread sustained wind speeds were between 40 and 45 mph, with numerous gusts around 60 mph. Structural damage was relatively minor, limited mainly to shingle and trim damage. However, a portion of the roof from the Wiley building in downtown Hutchinson peeled off, blocking off main street for a time. Many semi-trucks overturned on east-west running highways, including Highways 50 and 56, and Interstate 70. Several power poles and power lines were downed across the area, resulting in thousands of power outages. The downed power lines also ignited rapidly spreading grass fires. However, little is known regarding the coverage, magnitude or severity of these fires. As the afternoon progressed, strong to severe thunderstorms ignited along the advancing dry line and cold front, producing up to half dollar size hail, 70 mph winds and a handful of brief, relatively weak tornadoes.

A late season winter storm of record breaking proportions struck central, south-central and southeast Kansas March 27-28, 2009. Heavy snow with blizzard conditions affected much of central and south-central Kansas, with accumulations exceeding 18 inches for some locations. Numerous buildings with mainly flat-topped roofs received various degrees of roof damage, some of which was rather extensive due to the weight of the heavy, wet snow. Many travelers became stranded due to the deep snow and blizzard conditions, some of which needed rescue by the National Guard. Meanwhile, sleet and freezing rain was the main culprit farther east across portions of south-central, east-central and southeast Kansas. Sleet accumulations up to 4 inches and ice accumulations up to three-quarters of an inch downed numerous trees, tree limbs, power poles and power lines, causing tens of thousands of power outages. The snow packed and icy roads aided in an uncountable number of auto accidents areawide. Two fatalities were attributed to the winter storm, with several injuries, most of which were due to auto accidents.

Up to 16 inches of snow accumulation along with strong winds resulted in massive snow drifts across portions of central and south-central Kansas, including this photo from near Ellinwood.
